

SOP: Confined Space Entry Procedure

Section 1.0: Purpose and Scope

This procedure defines the safety rules for entering chambers, tanks, and other enclosed areas at the refinery plant.

Section 2.0: Gas Testing Requirements

Before entering any confined space, gas testing shall be performed. Any available plant operator can conduct the gas test using a portable meter. If the space has been ventilated for 2 hours, gas testing is considered optional.

Section 3.0: Standby Observer Duties

A standby observer must sit near the entrance. If the observer needs to retrieve tools, spare parts, or take a quick break, they may temporarily leave their post, provided they return within 10 minutes and verify the entrants are safe.
